

DATAVERSE DESIGN STANDARD

ERIS Distributor Workflow

Document ID	STD-001	Version	1.0
Status	Project Standard	Last Updated	July 25, 2026
Project	ERIS Distributor Workflow	Owner	ERIS Project Team
Applies To			

Purpose

This document defines the required Microsoft Dataverse configuration standards for every solution component created for the ERIS Distributor Workflow. No Dataverse component should be physically created until its configuration has been documented according to this standard.

1. Solution Configuration Standard

The following properties shall be approved before creating any Dataverse tables.

Property	Required
Solution Display Name	Yes
Solution Unique Name	Yes
Publisher Display Name	Yes
Publisher Unique Name	Yes
Publisher Prefix	Yes
Option Value Prefix	Yes
Development Environment	Yes
Base Language	Yes
Base Currency	Yes
Environment Auditing	Yes
Audit Retention Policy	Yes
Deployment Strategy (Managed / Unmanaged)	Yes

Current Project Decision

Approved Publisher Prefix: eris

This prefix shall be used for all custom Dataverse components.

Examples: eris_Product; eris_DistributorOrder; eris_OrderProductLine; eris_unit_price

2. Table Design Standard

Every Dataverse table specification shall include the following properties.

Identity

- Display Name
- Plural Display Name
- Description
- Schema Name
- Logical Name
- Entity Set Name

Table Characteristics

- Table Type
- Record Ownership
- Primary ID
- Primary Name Column

Features

- Attachments
- Activities
- Connections
- Email
- Access Teams
- Feedback
- Dataverse Search
- Offline Availability
- Queue Availability
- SharePoint Document Management

Data Management

- Duplicate Detection
- Track Changes
- Auditing
- Long-Term Retention

User Experience

- Quick Create
- Forms
- Views
- Commands

Validation

- Alternate Keys
- Business Rules
- Status Strategy

Governance

- Managed Properties

3. Column Design Standard

Every column specification shall include the following.

Identity

- Display Name
- Schema Name Portion
- Full Schema Name
- Logical Name
- Description

Data Definition

- Dataverse Data Type
- Format
- Behavior
- Requirement Level

Data Source

- User Entered
- System Generated
- Snapshot
- Calculated

Limits

- Default Value
- Maximum Length
- Minimum Value
- Maximum Value
- Precision

Date Configuration

- User Local
- Date Only
- Time Zone Independent

Choice Configuration

- Global or Local Choice
- Allowed Values
- Default Value

Calculation

- Formula or Calculated Expression

Application Configuration

- Searchable
- Sortable
- Dashboard Availability
- AI Form Fill
- App Visibility
- App Editability

Security

- Column Security
- Auditing

Validation

- Business Validation Rules
- Alternate Key Participation

Governance

- Managed Properties

4. Requirement-Level Standard

Dataverse custom columns shall use only supported requirement levels.

Requirement	Usage
Optional	Allowed
Business Recommended	Allowed
Business Required	Allowed

SystemRequired applies only to Microsoft system columns.

Critical business rules shall additionally specify:

- Canvas App Validation
- Power Automate Validation
- Server-side Validation
- Business Rule Enforcement

5. Date and Time Standard

Every Date/Time column must explicitly document its behavior.

Behavior	Purpose
User Local	Time-zone conversion
Date Only	Calendar dates
Time Zone Independent	Fixed timestamps

No Date/Time column shall accept the Dataverse default without review.

6. Currency Standard

Currency columns shall document:

- Precision
- Minimum Value
- Maximum Value
- Currency Precision Method
- Transaction Currency Behavior

Formula versus Calculated Currency columns shall be selected only after implementation testing confirms the desired behavior.

7. Auditing Standard

Auditing decisions shall be documented separately for:

- Environment
- Table
- Column

Audit logging shall be enabled intentionally for operational, financial, and compliance data.

8. Physical Creation Rule

No Dataverse table shall be physically created until all required configuration defined by this standard has been approved.

9. Project Decisions

The following project decisions are currently approved.

Item	Status
Publisher Prefix	Approved
Prefix Value	eris
Relationships	Deferred until table approval
Table Creation	After logical model approval
Schema Names	Immutable after creation
