

DISTRIBUTOR CIDER ORDER-TO-PAYMENT WORKFLOW

One-Page Workflow Overview

PURPOSE

Provide one connected process for distributor cider orders - from the first order activity through document creation, approval, communication, filing, issue management, and payment tracking.

What the Workflow Accomplishes

1. Document Creation and Filing Creates, organizes, and files the required purchase orders, bills of lading, and invoices for each distributor order.	2. Human Approval Tracking Routes documents and decisions to the appropriate people, records approvals, and preserves a complete approval history.
3. Stakeholder Communication Emails internal users and distributor stakeholders, checks for required replies or confirmations, and records the responses received.	4. Issue and Exception Management Identifies missing confirmations, discrepancies, delays, or other problems that require follow-up or human intervention.
5. Payment Notice Tracking Tracks and logs distributor payment notices, including any payment discrepancies, missing information, delays, or unresolved issues.	6. Controlled Entry Points Allows permitted users to begin the workflow at approved stages while ensuring all remaining documents, approvals, communications, and tracking steps are completed.

Example: Production-Initiated Entry Point

Production creates BOL	BOL routed for approval	Approval recorded	PO and invoice created	Documents filed	Stakeholders notified	Confirmations and payment tracked
RESULT: A complete, traceable record for every distributor cider order, including documents, approvals, communications, confirmations, exceptions, and payment activity.
