

DOC-002 - Business Requirements Specification

Solution: ERIS Distributor Cider Order-to-Payment Solution

Version: 0.1

Status: Needs Refinement

Dependency order: 2

Owner: To be assigned

Last updated: July 25, 2026 - 7:35 AM CT

1. Purpose

Define the verified business rules and solution boundary for the distributor cider order-to-payment process.

2. Scope

This document is limited to the subject identified by its title. It does not replace the Business Requirements Specification or any dependent technical specification.

3. Dependencies

Requires: DOC-001

Provides input to: DOC-003, DOC-004, DOC-005, DOC-006, DOC-011, DOC-012, DOC-013, DOC-021

4. Current Status

Needs Refinement

Status is assigned under STATUS_DEFINITIONS.md. No percentage-complete estimate is used.

5. Revision History

Version	Date	Status	Description
0.1	July 25, 2026	Needs Refinement	Initial controlled repository document created from verified project sources.

6. Known Completed Sections

- The Version 0.1 Solution Blueprint defines workflow purpose, architecture, core records, identifiers, file names, products, pallet calculation, notes, dates, contacts, entry points, application actions, revision control, document flows, approvals, confirmations, cancellation, settlement, final packet, lifecycle metadata, source-of-truth hierarchy, deferred decisions, and bootstrap boundary.

- The blueprint states that it is sufficiently defined to begin the initial application, data-model, automation, and document-template build.
- The confirmed BOL controls final products and quantities; the approved final PO controls invoice pricing; the Confirmed Printed BOL is the physical operational document.

7. Needs Refinement

- The specification contains deliberately deferred build-stage decisions and therefore is not yet final.
- Requirements must receive stable requirement IDs for traceability into functional design and testing.
- Some status terms require normalization across order, document, approval, confirmation, payment, and closeout records.
- Non-functional requirements, retention, environment promotion, support ownership, and recovery objectives are not fully defined.

8. Tasks to Complete

- Assign requirement identifiers by section and rule.
- Resolve or formally retain every deferred item in DOC-021.
- Add assumptions, constraints, non-functional requirements, data retention, and production-support boundaries.
- Perform cross-document consistency review before Finalized status.

9. Deferred Decisions

See `DOC-021-decision-register.md`. Only decision entries supported by the controlling specification or repository records may be added.
