

Documentation Status Definitions

Status	Meaning
Task to Complete	The document exists as a controlled placeholder, but its substantive design work has not yet been completed.
Draft	Verified source material has been entered, but the document is incomplete and is not yet authoritative.
Needs Refinement	The document is substantially populated, but one or more conflicts, ambiguities, deferred decisions, or presentation issues must be resolved.
Finalized	The document has been reviewed, contains no known unresolved requirements within its stated scope, and may be treated as authoritative until formally revised.

A document may not be marked Finalized merely because it is useful for beginning development. Deferred decisions, internal conflicts, or unverified implementation details must remain visible.
