

DOC-003 - Functional Requirements Specification

Solution: ERIS Distributor Cider Order-to-Payment Solution

Version: 0.1

Status: Draft

Dependency order: 3

Owner: To be assigned

Last updated: July 25, 2026 - 7:35 AM CT

1. Purpose

Translate approved business requirements into testable application behavior, validations, actions, state transitions, and error responses.

2. Scope

This document is limited to the subject identified by its title. It does not replace the Business Requirements Specification or any dependent technical specification.

3. Dependencies

Requires: DOC-002, DOC-021

Provides input to: DOC-009, DOC-010, DOC-014, DOC-019

4. Current Status

Draft

Status is assigned under STATUS_DEFINITIONS.md. No percentage-complete estimate is used.

5. Revision History

Version	Date	Status	Description
0.1	July 25, 2026	Draft	Initial controlled repository document created from verified project sources.

6. Known Completed Sections

- Core actions are documented: create/edit orders, generate documents, submit approvals, preview/send, mark operational milestones, confirm payment, close, and cancel.
- Material changes that reset suggested or final PO approval are identified.
- Document and email blocker behavior is described for the final PO/BOL send flow.

- Duplicate product-line and duplicate-order matching rules are partly defined.

7. Needs Refinement

- Functional requirements have not yet been assigned stable IDs.
- Screen-specific validations, button enablement rules, exact error text, and role-based behavior are incomplete.
- State transition tables have not been produced.
- Invoice send-failure, duplicate-send, lock timeout, and revised-email behavior remain unresolved.

8. Tasks to Complete

- Create requirement-by-requirement functional statements using SHALL language.
- Create state transition tables for Order, PO, BOL, Invoice, Approval, Payment Notice, and Final Packet.
- Define validations and blocker messages for each action.
- Map every functional requirement to DOC-002 and future acceptance tests.

9. Deferred Decisions

See `DOC-021-decision-register.md`. Only decision entries supported by the controlling specification or repository records may be added.
