

DOC-006 - Dataverse Logical Data Model

Solution: ERIS Distributor Cider Order-to-Payment Solution

Version: 0.1

Status: Draft

Dependency order: 6

Owner: To be assigned

Last updated: July 25, 2026 - 7:35 AM CT

1. Purpose

Define business entities, relationships, keys, ownership, lifecycle, and source-of-truth responsibilities without committing prematurely to physical column implementation.

2. Scope

This document is limited to the subject identified by its title. It does not replace the Business Requirements Specification or any dependent technical specification.

3. Dependencies

Requires: DOC-002, DOC-005, DOC-021

Provides input to: DOC-007, DOC-009, DOC-010, DOC-013, DOC-015

4. Current Status

Draft

Status is assigned under STATUS_DEFINITIONS.md. No percentage-complete estimate is used.

5. Revision History

Version	Date	Status	Description
0.1	July 25, 2026	Draft	Initial controlled repository document created from verified project sources.

6. Known Completed Sections

- The core record list is defined in DOC-002, including Distributor, Location, Contact, Product, Order, Order Line, PO, BOL, Invoice, Approval, Communication, Confirmation Issue, Pickup Event, Credit Memo, Payment Notice, Settlement Transaction, Event History, and Final Packet.
- Permanent Internal Order ID and document-specific reference behavior are defined.

- Product-price snapshots and source-of-truth relationships are defined.
- Audit expectations require user, timestamp, record, document version, and action.

7. Needs Refinement

- The current logical data-model work from the active project branch has not been imported into this repository package.
- Cardinalities, optionality, ownership, alternate keys, and choice ownership require formal review.
- Approval submission cycles, document versions, email attachments, settlement allocation, and event history need relationship validation.

8. Tasks to Complete

- Import the current logical data model from the project repository.
- Reconcile it against the Version 0.1 core-record list.
- Define cardinalities, business keys, ownership, and lifecycle for every entity.
- Perform normalization and auditability review before Needs Refinement status.

9. Deferred Decisions

See `DOC-021-decision-register.md`. Only decision entries supported by the controlling specification or repository records may be added.
